Profile

Hardworking student, dedicated to reaching objectives accurately and controls tightly to meet all the needs of the company. Systematic and well-organized with strong attention to detail, programmatic and analytical knowledge. Eager to fulfil the role of increased responsibility to add value to the organization.

Education

B.Tech in Computer Science and Engineering	2020 - 2024
Balaji Institute of Technology and Science, Warangal, with 7.84 GPA	
Intermediate in MPC	2018-2020
Shine Junior College, Warangal with 89%	
SSC	2018
Fatima Girls High School with 9.2 GPA	

Technical Skills

Languages: Java, Python, Testing-Manual Testing: Regression Testing, Bug life cycle, SDLC, STLC, Test Cases, Test Scenarios, etc, Automation Testing: Locators, X path, POM, TakeScreenshot, TestNG, SQL.

Tools: Eclipse IDE, Eclipse IDE -SELENIUM Tool, Visual Studio Code.

Hands-on experience in AI building a bot on Smart Banking.

Smart Banking Virtual Assistant

- Developed a virtual assistant using Kore.ai to handle customer inquiries related to account balance, fund transfers, new account openings, and FAQs.
- Implemented entity extraction and dialog tasks for dynamic conversation flows.
- Integrated with third-party APIs for secure transactions.
- Enhanced user experience with sentiment analysis and conversational analytics.

Projects

Code Unity Hub Using MERN Stack

- This project aims to create a similar platform that provides users with the ability to search for GitHub profiles and repositories, explore popular repositories, and manage their code repositories efficiently. One of the key features of this application is its sorting capabilities, which allow users to sort repositories based on various criteria, including most recent, most stars, and most forks.

Environment:

- JavaScript,

Responsibilities:

- To build and maintain the user interface using React, ensuring smooth user interactions and interaction

Bird vs Drone Image Classification

The project aims to classify and predict what a small flying object in the sky is by capturing its image and passing to an Artificial Neural Network (ANN) whose functionality is to figure out and predict if that unidentified flying object that is captured is bird (no potential threat) or a drone (a potential threat) by simply passing the image to the Neural Network.

Environment:

- Python, Machine Learning.

Responsibilities:

- Involved in prediction of bird and drone probability.
- Predicting whether the flying object in the sky was a bird or drone.
- Capture image of a flying object and process the model, getting the output identification of the object as drone or not.

Certifications

1. **Java Introduction**, Sololearn.
2. **Programming Essentials in Python**, Cisco Network Academy.
3. **Introduction to Cyber Security**, Cisco Network Academy.
4. **Introduction to Generative AI**, Google Cloud.
5. **Career Edge-Knockdown the Lockdown Certificate**, TCS iON.
6. **SQL Introduction**, Sololearn.
7. **SDET Training Completion Certificate**, Q Spider, JNTUH, Hyderabad, Telangana.
