

Akhila Enumula

Computer Science And Engineering Student

Contact

+91 7993821162,
Akhila.enu2002@gmail.com
Warangal, Telangana, India-
506013.

Education

B.Tech in BITS, Narsampet.

10/2020 – 12/2024.

Computer Science and Engineering,

7.85/10.

Shine Junior College

07/2018 - 05/2020.

Intermediate (TSBIE), **89.6%**.

Fatima Girls High School

06/2013 - 04/2018.

School (BSE, Telangana), **9.2/10.**

Interests

Cricket
Carrom Board
Basket Ball
Dancing Kabaddi
Listening Music

Languages

English

Professional Proficiency

Hindi

Bilingual Proficiency

Telugu

Native Proficiency

Skills:

Programing Languages:

Java, Python.

Frontend Technologies:

Html, Css, JavaScript.

Databases: MySQL.

Testing:

Manual Testing-Testcases,
Regression Testing, Bug life cycle,
SDLC,STLC , Automation Testing.

About

Hardworking student, dedicated to reaching objectives accurate and controls tight to meet all the needs of the company. Systematic and well-organized with strong attention to detail, programmatic and analytical knowledge. Eager to fulfill the role of increased responsibility to add value to the organization.

Research and Projects

Bird Vs Drone Image Classification

Description:

The aim of the project is to classify and predict what a small flying object in the sky is by capturing its image and passing to an Artificial Neural Network (ANN) whose functionality is to figure out and predict if that unidentified flying object that is captured is bird (no potential threat) or a drone (a potential threat) by simply passing the image to the Neural Network. **02/2023 - 08/2023. Environment:**

Python, Machine Learning. **Responsibilities:**

- Involved in prediction of bird and drone probability.
- Predicting the flying object in the sky was bird or drone.
- Capture image of a flying object and processing the model, getting the output identification of object as drone or not.

Code Unity Hub

Description:

This project aims to create a similar platform that provides users with the ability to search for GitHub profiles and repositories, explore popular repositories, and manage their code repositories efficiently. One of the key features of this application is its sorting capabilities, allowing users to sort repositories based on criteria such as most recent, most stars, and most forks.

Work Experience:

Catalyst InfoLabs (Warangal ,India-Present)

Key Responsibilities:

- Designed and deployed machine learning and deep learning models for predictive analytics and automation.
- Built data preprocessing pipelines and optimized training workflows using Python, TensorFlow, and scikit-learn.
- Collaborated with cross-functional teams to integrate AI models into production via REST APIs and cloud platforms.
- Performed model evaluation, tuning, and monitoring to improve performance and accuracy.

Certificates:

- Python Essential Training -Linkedin Learning
- Machine Learning with python-Linkedin Learning
- Introduction to SQL Certification - sololearn.
- SDET Training Course-Qspiders
- Career Edge - Knockdown the Lockdown Certificate - TCS iON.
- Automation - Geek For Geeks
